

HusebyConnect 2.0 Enhancements

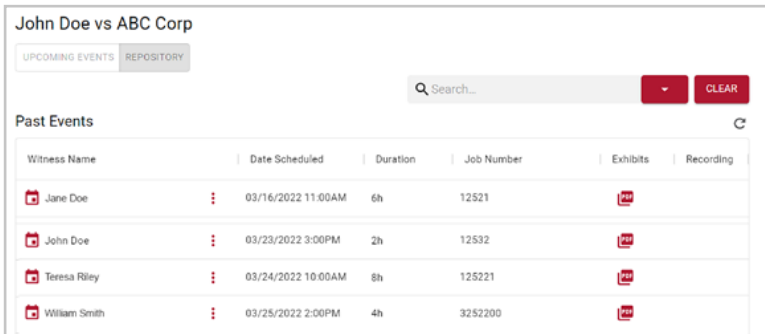

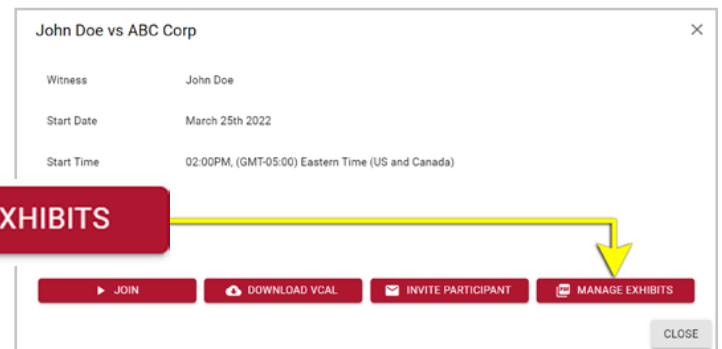

Our proprietary software has been designed just for you and your remote litigation needs. We are always working to add new and cutting-edge features to ensure you have the best tools in the business. Here are some from the latest HC 2.0 update!

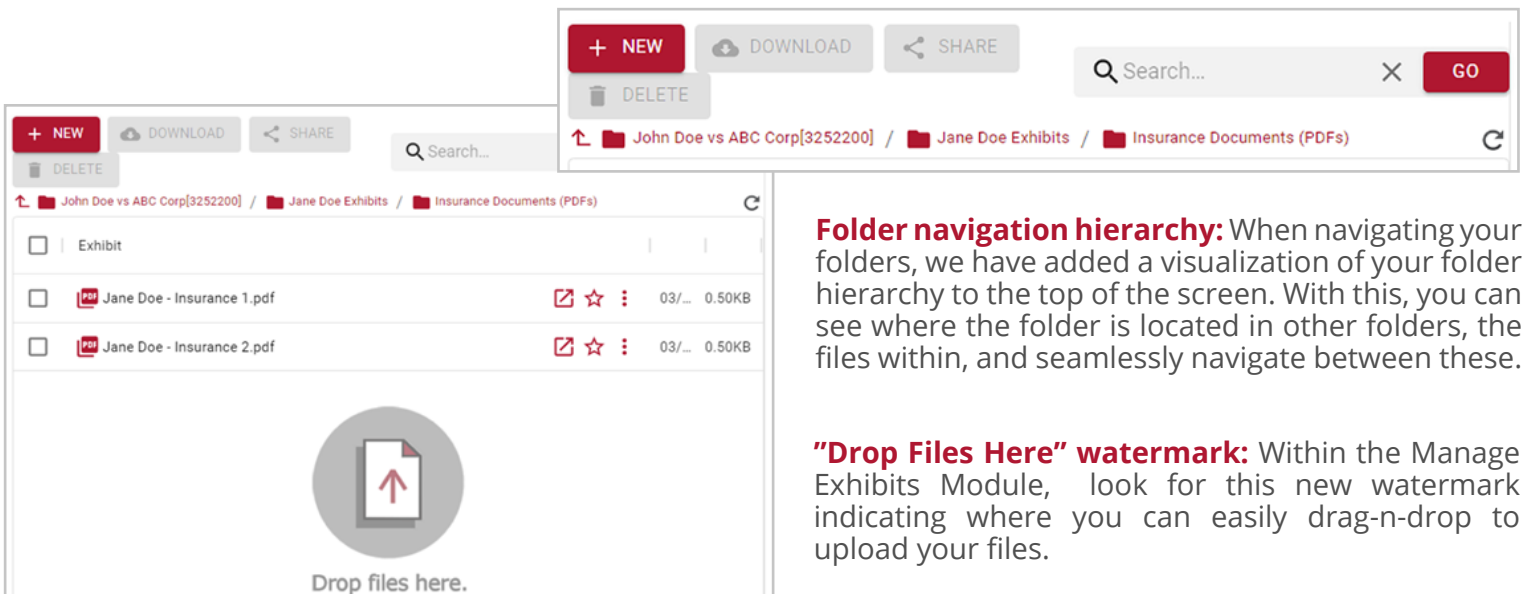

Quick Launch Button: Within your Manage Exhibits module, a new Quick Launch button allows you to intuitively and quickly launch an exhibit into the Exhibit Editor.

Manage Exhibits Button: Now, directly from your event calendar entry, when clicking on your event details, there is a new Manage Exhibits button, from which you can launch the Manage Exhibits module.

Past events categorized by witness name: In your Case Repository, your past events within a case are now distinguished by witness name. Sort the past events of your matter alphabetically, to easily find them for reference or review.

Folder navigation hierarchy: When navigating your folders, we have added a visualization of your folder hierarchy to the top of the screen. With this, you can see where the folder is located in other folders, the files within, and seamlessly navigate between these.

"Drop Files Here" watermark: Within the Manage Exhibits Module, look for this new watermark indicating where you can easily drag-n-drop to upload your files.
